

- Write a program that asks users to enter a positive integer n and calculates the factorial of n ($n!$)
- Write a program that asks users to enter a positive integer n and check if n is a prime number or not
- Write a program that asks users to enter a positive integer n and finds the reverse of n . For example, if $n = 1234$, then the reverse of n is 4321
- Write a program that asks users to enter two positive integers and determines the greatest common divisor of these integers
- Write a program that asks users to enter a positive integer n and a positive floating-point number x . Calculates the sum
$$S(n) = x + x^2 + x^3 + \dots + x^n$$
